## MOLD Remediation Tips for Porous Surfaces

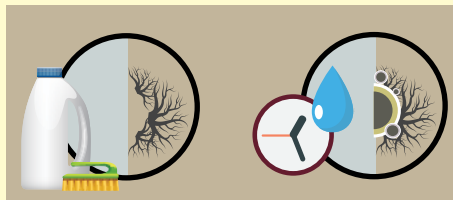

To grow, mold needs:  
**1. Moisture**  
**2. Organic Materials**

Growth can happen in as little as 24-48 hours. So it is important to quickly dry out and clean porous surfaces.

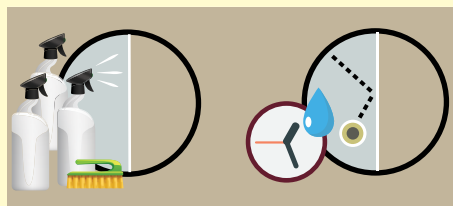

Bleach will remove surface mold but **NOT** the roots.

Over time and with moisture in the air, mold can re-grow.

Use a disinfectant cleaner to **TREAT AND PREVENT** mold.

**ONLY AFTER** the mold has been properly remediated, should the area be primed and painted.
